APPROVAL CERTIFICATE

This project, entitled as "Gangster's War" has been approved for the award of

Bachelors of Science in Computer Science

Committee Signatures:	
Supervisor:	
	(Ms. Mammona Qudsia)
Project Coordinator:	
	(Mr. Ibrar Arshad)
Head of Department:	
	(Dr. Nayyer Masood)

DECLARATION

We, hereby, declare that "No portion of the work referred to, in this project has been submitted in support of an application for another degree or qualification of this or any other university/institute or other institution of learning". It is further declared that this undergraduate project, neither as a whole nor as a part thereof has been copied out from any sources, wherever references have been provided.

MEMBER	S' SIGNATU	RES

ACKNOWLEDGEMENTS

The success and final outcome of this project required a lot of guidance and assistance from our supervisor and other panel members and I am extremely privileged to have got this all along the completion of our project. All that I have done is only due to such supervision and assistance and I would not forget to thank them.

I respect and thank Ms. Mammona Qudsia, for providing us an opportunity to do this project and giving us all support and guidance which made us complete the project duly. We are extremely thankful to her for providing such a nice support and guidance, although she had a busy schedule managing the classes load.

I am thankful and fortunate enough to get constant encouragement, support and guidance from all project panels which helped us in successfully completing our project work. Our panel gave us great suggestions to complete our project efficiently in time.

DEDICATION

I dedicate this project to God Almighty my creator, my strong pillar, my source of inspiration, wisdom, knowledge and understanding. He has been the source of my strength throughout this program and on His wings only have I soared. Ms. Mammona Qudsia has been the ideal project supervisor. Her sage advice, insightful criticisms, and patient encouragement aided creation of project in innumerable ways.

Executive Summary

Gangster's war game is really a futuristic game that can playable being online and offline at same time. The player's main aim will be to get maximum kills to win the game. There are two different modes in which any player can play game which are online and offline. As online shows it can only be playable when a player have active internet connection and at same time offline mode can be played on normal PC. So while going in online mode the player can create/Join server the server, either when first player goes he has to create server to add his friends or may be any player from globe in his server which he created. If some other player join game he/she can join the already created server. After joining of the server there new step comes to select player category from given two types as Assault and SWAT, which have different guns. All required information will be in on top left side of playing screen. While playing in other mode which don't required to be online compulsory. In offline mode the player have to kill all the bots walking in the map there is different map than online one. The player have to kill all the bots (computer based players) to win the game.

Chapter 1

Introduction

1.1 Project Introduction

This chapter include a basic information about a Desktop online game called "Gangster War". Basically, this will work online. All players will must be connected with internet to join game. All players will fight with each other. The Player who has highest death rate will lose. Any player whose power gone to zero will be respawned. Match is dynamic (When all players left game) game will end. There are multiple players can fight with each other using guns. The project work breakdown and the proposed time to finish different modules of the project have been included in this chapter.

While playing game any player can select from two given modes which he/she want to play as Online and Offline mode. As name of Online shows it can only be play able having the working internet connection to connect with cloud and can only connected to other players using internet. So, when player wants to play online mode he/she must have to create the server for other players to join and can play in multi-player mode across globe. While one player created server other players just have to join that created server just by clicking its name given on Create Server screen. After joining of the server player have to select from given categories as SWAT and Assault. Any player whose power gone zero will be respawned. HP (Health points), Scores, Death and Ammo will be shown on top right of screen. Player can control movement of character. Health Score also displayed on enemy head. Player can use multiple guns such as CZ-805, SVD (Sniper) and MP05.

1.2 Objective

All players who will play the game, their main aim will be to win the match. The win and lose will be on the basis of maximum number of kills in online mode. Any Player can shoot all other players who are playing in the server. Player can use Gun to shoot other players. Every bullet shot can damage the 5%, 80%, and 40% to the health point of player.

1.3 Features

- > Respawn
 - Any player whose power gone zero will be respawned.

Design Characters

• We will design a character for game.

> Fighting Riffles

• We will be use built-in texture for guns.

Score Manage

Two Types of Score Manager

- If player die then Death rate increase by one
- When bullet hit enemy Score rate increase by one

> Server Create

- Server creation through internet.
- The minimum player limit is 1.

> Health Points

- Health point 5% decreases on one bullet by Cz805.
- Health point 80% decreases on one bullet by Sniper SVD.
- Health point 40% decreases on one bullet by MP05.

➤ Map Designing

• Containers

The container is used for defense from opponent. Player will be hide behind the container for safety.

Desert

The Ground is like as a Desert.

- Houses
 - Double story
 - o Single story with one door.
 - Single story with two doors.
- Tunnels

- Swings
- Mountains
- Bridge
- Trees
- Fence wall

> Animation:

- Walk
- Run
- Idle
- Jump
- Firing

1.4 Existing Examples / Solutions

There are a number of games developed which can be considered as existing examples for over projects. The Comparison is shown in below table.

Table 1.1 Existing Examples

Serial No	Features	CRAZY PIXEL	MODERN BLOCKY PAINT	Gangster's war
1	Available On	Desktop	Desktop	Desktop
2	Limited Movement	Yes	Yes	Yes
3	ADS Free	No	No	Yes

1.5 Business Scope

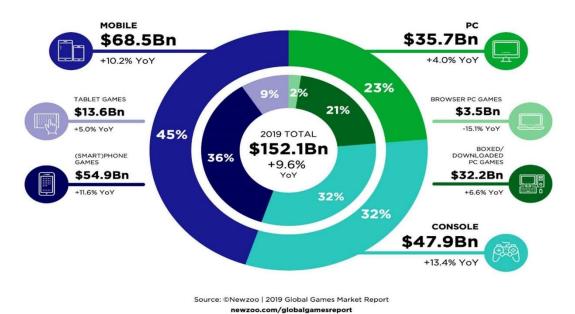

Figure 1-1 Business Scope

There are now more than 2.5 billion gamers across the world. Combined, they will spend \$152.1 billion on games in 2019, representing an increase of +9.6% year on year.

Console will be the fastest-growing segment this year, growing +13.4% year on year to \$47.9 billion in 2019.

Mobile gaming (smartphone and tablet), meanwhile, remains the largest segment in 2019, growing +10.2% year on year to \$68.5 billion—45% of the global games market.

PC gaming will be both the smallest and slowest-growing segment, increasing +4.0% year on year to \$35.7 billion.

1.6 Useful Tools and Technologies

We will be using the following tools and technologies in our project.

Unity3D game engine will used as the main development tool to develop the game.

Language will be used for the programming and the development of the game logic and functionality.

Visual studio Microsoft Visual Studio is an integrated development environment from Microsoft. It is used to develop computer programs, as well as websites, web apps, web services and mobile apps.

Make human is free and open source 3D computer graphics middleware designed for the prototyping of photorealistic humanoids.

Blender is a free and open-source 3D computer graphics software toolset used for creating animated films, visual effects, art, 3D printed models, motion graphics, interactive 3D applications, and computer games.

Chapter 2

REQUIREMENT SPECIFICATION and ANALYSIS

This chapter includes all of the requirement specifications and their analysis of the project "Gangster's war". The main modules in this Game include the environment, characters and playing online to let players can play remotely. These components consist of multiple elements such as Container, weapon objects, enemies, controls, shooting, game menu and animation.

2.1 Functional Requirements

The Functional Requirements Specification will give a complete list of functional requirement which will be easily understandable by the customer as well as by the requirements engineer. All of the functional requirements are shown in Table 2.1.

Table 2.1 Functional Requirement

S. No.	Functional Requirement	Type	Status
1	The player should be able to start a game	Core	Completed
2	The player should be able to create the server	Core	Completed
3	Players should be able to join the server.	Core	Completed
4	The player should be able to aim while the character is holding a weapon	Core	Completed
5	The player should be able to fire the gun his character is holding gun.	Core	Completed
6	The player should be able to jump.	Core	Completed
7	The player should be able to move right.	Core	Completed
8	The player should be able to move left.	Core	Completed
9	The player should be able to backward and forward.	Core	Completed
10	The player should be able to control the movements of his character and move it freely in the map	Core	Completed

11	The player should be able to go into houses.	Core	Completed
12	The player should be able to damage opponent's health	Core	Completed
13	The player should be able to leave the server.	Core	Completed
14	The player should be able to view the score, death and ammo.	Nominal	Completed
15	The player should be able to exit the game.	Core	Completed
16	The player should be able to enter the character name	Nominal	Completed
17	The player should be able to interact with the environment (like containers, roads, tunnels and houses.)	Core	Completed
18	The player should be able to attack with gun to other players.	Core	Completed
19	The player should be able to select AI mode from options.	Core	Completed
20	The player should be able to send massage to other players.	Core	Completed

2.2 Non-Functional Requirements

Non-functional requirements include performance, scalability, availability, reliability, maintainability and usability of the system.

All of the non-functional requirements are shown in Table 2.2.

Table 2.2 Non-Functional Requirements

S. No.	Non Functional Requirements	Category
1	There will be multiple types of guns:	System Level
	• Cz805	
	> damage: 5	
	➤ Ammo. : 40	
	> clip count: 1000	
	range: 100	

	Sniper SVD									
	b damage: 80									
	> range : 2500									
	> clip count: 1000									
	> Ammo:5									
	• MP05									
	→ damage : 40									
	> range: 100									
	> clip count: 1000									
	> Ammo:40									
	range 100									
	range 100									
2	Guns will have 1000 Clip and 1 clip have 40 or 5 bullets	System Level								
	and require reloading after zero remaining bullet in clip									
3	The player will be able to move in complete 360 degree	User Level								
4	The main objective of player should be to lowest death rate. User level.									
5	The player name entered by the user will be used on character head between the games.	User Level								
6	When player got shot its main screen (face view) will become bloody.	User Level								
7	The timer and kill count will always be visible to the user in UI.	User Level								
8	The player will be shown the number of bullets in the gun available in magazine for the gun	User Level								
9	When the gun held by the player goes empty it will user Level reloaded manually by pressing R.									
10	The player will die when they completely lost 100% their health. User Level									
11	The player name can be as long as 16 characters maximum and can be as minimum as 1 character	System Level								
12	While playing in the AI mode there will be bots (Computer made fake players) that will shoot at players.	System Level								

Items Designed:

- . Character.
- * Character rigging (motion of bones).
- Desert.
- Containers.
- . Houses.
- Tunnel.
- GUI (Main page, Home Page, Settings).
- ❖ One Gun.
- Billboard
- Swing
- Trees
- ❖ Fence wall.
- . Crosshair.

Animations:

- * Walk.
- Run.
- Idle.
- Jump.
- Firing.

Advanced Features:

- ❖ AI mode.
 - Using built-in map
 - Player
 - Bot
 - Gun
 - Bot will kill when player come in front of Bot.
 - TTP
- Death effect
- ❖ Ammo Count.

Description:

The character can move in and out of the tunnel.

6: swing

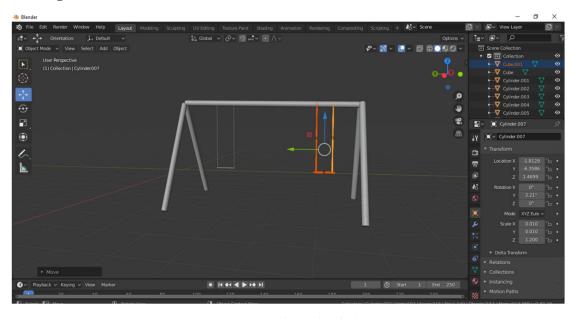

Figure 3-7 Swing

Description:

Swing will show in the map but cannot be used by the player in the game.

Chapter 4

Software Development

4.1 Coding Standards

- Meaningful and descriptive words will be used while coding the project.
- Variables and method names will be concatenated all in one if there would be several words against a name.
- Lowercase will be used for the first word and each next word would be starting from uppercase.

4.2 Development Environment

Unity, Visual Studio, Make Human and Blender are the tools that used in the project.

- Gangster's war Game will be online that will able to play across the globe.
- C# programming is used during making this project so of the code is given below.

4.3 Software Description

• Cameras:

```
Using System. Collections;
Using System.Collections.Generic;
Using Unity Engine;

public class ThirdPersonCamera: MonoBehaviour
{
    [System.Serializable]
    public class CameraRig
    {
        public Vector3 CameraOffset;
        public float CrouchHeight;
        public float Damping;

    }

// 0.7 8.0 -7
// 5
    [SerializeField]
```

```
CameraRig defaultCamera;
  [SerializeField]
  CameraRig aimCamera;
  Transform cameraLookTarget;
 Player localPlayer;
  void Awake(){
    GameManager.Instance.OnLocalPlayerJoined += HandleOnLocalPlayerJoined;
  void HandleOnLocalPlayerJoined(Player player)
    localPlayer = player;
    cameraLookTarget = localPlayer.transform.Find("AimPivot");
    if (cameraLookTarget == null)
       cameraLookTarget = localPlayer.transform;
  void LateUpdate()
    if (localPlayer == null)
      return;
    CameraRig = defaultCamera;

```

Chapter 5

Software Testing

Software Testing is the most crucial part of Software Development Process. It is the investigation or evaluation of a software component, improving them, and finding bugs and defects. Testing is usually done by executing a system in such a way that it identifies any gaps, errors, or missing requirements in contrary to the actual requirements. This chapter provides a description about the adopted testing procedure. This includes the adopted testing methodology, test suite and the test results of the developed software.

5.1 Testing Methodology

We have used black box testing in our testing phase. Black box contains certain benefits that include following:

- Black box testing examines the functionality of application without peering into its internal structure.
- This method can be applied to every level of the software testing which include unit, integration, system and acceptance.

Black Box unit testing is used in our project. Unit testing is a software testing method by which individual units of source code, sets of one or more computer program modules, together with associated control data, usage procedures and operating procedures are tested to determine whether they are fit for purpose.

5.2 Testing Environment

5.2.1 Test Case: Moving Character Forward

Table 5.1 Moving Character Forward

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Character movement.	Test ID:1
Version:1	Test Type: Unit testing
Input: Press W to move character forward	
Expected Result: Moving character forward.	
Actual Result: passed	

5.2.2 Test Case: Moving Character Backward

Table 5.2 Moving Character Backward

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Character movement.	Test ID:2
Version:1	Test Type: Unit testing
Input: Press S to move character backward\	
Expected Result: Moving character backward.	
Actual Result: passed	

5.2.3 Test Case: Moving Character Right

Table 5.3 Moving Character Right

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Character movement.	Test ID:3
Version:1	Test Type: Unit testing
Input: Press D to move character backward	
Expected Result: Moving character Right sid	le.
Actual Result: passed	

5.2.4 Test Case: Moving Character Left

Table 5.4 Moving Character Left

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Character movement.	Test ID:4
Version:1	Test Type: Unit testing
Input: Press A to move character backward	
Expected Result: Moving character Left side.	
Actual Result: passed	

5.2.5 Test Case: Jumping

Table 5.5 Jumping

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Character movement.	Test ID:5
Version:1	Test Type: Unit testing
Input: Press SPACE to jump by character.	
Expected Result: Jumping of character.	
Actual Result: passed	

5.2.6 Test Case: Crouching

Table 5.6 Crouching

Date: 04 February, 2020		
System: Gangster's War.		
Objective: Character movement.	Test ID:6	
Version:1	Test Type: Unit testing	
Input: Press SHIFT to move character while crouching		
Expected Result: Crouching.		
Actual Result: passed		

5.2.7 Test Case: Creating Server

Table 5.7 Creating Server

Date: 04 February, 2020	
System: Gangster's War.	
Objective: creating server.	Test ID:7
Version:1	Test Type: Unit testing
Input: Enter in online mode to create server	
Expected Result: Created server	
Actual Result: passed	

5.2.8 Test Case: Joining Server

Table 5.8 Joining Server

Date: 04 February, 2020	
System: Gangster's War.	
Objective: creating server.	Test ID:8
Version:1	Test Type: Unit testing
Input: Press on server to join server	<u> </u>
Expected Result: Joined server. Actual Result: passed	

5.2.9 Test Case: Viewing Map

Table 5.9 Viewing Map

Date: 04 February, 2020	
System: Gangster's War.	
Objective: creating server.	Test ID:9
Version:1	Test Type: Unit testing
Input: Entered in map.	
Expected Result: Shown map.	
Actual Result: passed	

5.2.10 Test Case: Firing

Table 5.10 Firing

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:10
Version:1	Test Type: Unit testing
Input: Left Click from mouse.	
Expected Result: Shoot fire.	
Actual Result: passed	

5.2.11 Test Case: Moving in the houses

Table 5.11 Moving in the houses

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:11
Version:1	Test Type: Unit testing
Input: Move towards the houses.	
Expected Result: Moved In the house.	
Actual Result: passed	

5.2.12 Test Case: Joining AI Mode

Table 5.12 Joining AI Mode

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:12
Version:1	Test Type: Unit testing
Input: Click AI mode option.	
Expected Result: AI mode joined.	
Actual Result: passed	

5.2.13 Test Case: Opening Scope

Table 5.13 Opening Scope

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:13
Version:1	Test Type: Unit testing
Input: Press right mouse button while holding sniper	
Expected Result: Show zoomed view.	
Actual Result: passed	

5.2.14 Test Case: Damaging Health

Table 5.14 Damaging Health

System: Gangster's War. Objective: Firing	Test ID:14
Version:1	Test Type: Unit testing
Input: Press left mouse button to shoot.	
Expected Result: Health low to player who got hit.	

5.2.15 Test Case: Getting damage by bots

Table 5.15 Getting damage by bots

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:15
Version:1	Test Type: Unit testing
Input: Get shot by bot (PC based players).	
Expected Result: Get damaged and got killed	
Actual Result: passed	

5.2.16 Test Case: Aiming

Table 5.16 Aiming

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:16
Version:1	Test Type: Unit testing
Input: Hold pointer towards enemy	
Expected Result: X mark shows where is now aimed the gr	un
Actual Result: passed	

5.2.17 Test Case: Moving Character

Table 5.17 Moving Character

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:17
Version:1	Test Type: Unit testing
Input: Press any key from W,S,A,D to move character	
Expected Result: Movement shown on screen as player	press key.
Actual Result: passed	

5.2.18 Test Case: Sending Messages

Table 5.18 Sending Messages

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:18
Version:1	Test Type: Unit testing
Input: Press TAB button from keyboard to open chat dialog from	m bottom left side.
Expected Result: Type any message to press ENTER to b	proadcast that message to whole server.

5.2.19 Test Case: Show Score

Table 5.19 Show Score

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:19
Version: 1	Test Type: Unit testing
Input: Score can be shown on top right corner while enemies	s will show on his head.
Expected Result: Viewing score on screen	
Actual Result: passed	

5.2.20 Test Case: Show Deaths

Table 5.20 Show Deaths

Date: 04 February, 2020		
System: Gangster's War.		
Objective: Firing	Test ID:20	
Version:1	Test Type: Unit testing	
Input: Deaths can be shown on top right corner while enemies will show on his head.		
Expected Result: Viewing Deaths on screen		
Actual Result: passed		

5.2.21 Test Case: Show Ammo

Table 5.21 Show Ammo

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:21
Version: 1	Test Type: Unit testing
Input: Ammo can be shown on top right corner while enemies will show on his head.	
Expected Result: Viewing ammo on screen	
Actual Result: passed	

5.2.22 Test Case: Enter Player Name

Table 5.22 Enter Player Name

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:22
Version:1	Test Type: Unit testing
Input: While creating server also enter your name to use during	g game.
Expected Result: Name set successful.	
Actual Result: passed	

5.2.23 Test Case: Interact with the environment

Table 5.23 Interact with the environment

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:23
Version:1	Test Type: Unit testing
Input: After joining server player can move in map for	reely and move to and fro.
Expected Result: Go in map.	

5.2.24 Test Case: Attach Using Guns

Table 5.24 Attach Using Guns

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:24
Version:1	Test Type: Unit testing
Input: Players can attack on each other using different kind o	f guns as sniper and assault.
Expected Result: Attacking successful.	
Actual Result: passed	

5.2.25 Test Case: Leaving Server

Table 5.25 Leaving Server

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:25
Version:1	Test Type: Unit testing
Input: Press ESC button to open further options to s	elect disconnect.
Expected Result: Leaving server	
Actual Result: Failed	

5.2.26 Test Case: Firing gun while running in AI mode

Table 5.26 Firing gun while running in AI mode

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:26
Version:1	Test Type: Unit testing
Input: Press Mouse left button to fire while running.	
Expected Result: Firing done.	
Actual Result: Failed	

5.2.27 Test Case: Multiple Players

Table 5.27 Multiple Players

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:27
Version:1	Test Type: Unit testing
Input: Joining server by different players in online mode.	
Expected Result: Joined	
Actual Result: Passed.	

5.2.28 Test Case: Jump on containers

Table 5.28 Jump on containers

Date: 04 February, 2020	
System: Gangster's War.	
Objective: Firing	Test ID:28
Version: 1	Test Type: Unit testing
Input: When player wants to jump on containers present in the	map.
Expected Result: Jumped on them.	
Actual Result: Failed.	

Chapter 6

Software Deployment

6.1 Installation / Deployment Process Description

The downloading of game can be done by using this link:

https://mega.nz/file/YbYHjKoJ#rkbS03qNuyXeym1975d5x4L7V8vGKT3LlNzsIZBBOCE

To RUN:

• Download RAR file as:

Figure 6-1 Deployment

Having size of 867.7 MB

- Then UNZIP this file as Gangsters War.rar in any folder.
- Open EXE file as located in Gangster's war \Full.exe

Then game will run and can be played by any player around the globe.

Chapter 7

Project Evaluation

This chapter includes the examiner's evaluation report, including the points to be revised/included along with the selected requirements in the next iteration.

7.1 Project Evaluation Report

Examiner 1	Name:	
S. No.	Suggestion	
Oth	er Comments (If any):	
Sign	nature
